

# SCHOOL TEENAGE HARASSMENT PROBLEM STATEMENT

## Problem Statement

How might we design a comprehensive system that ensures students feel safe, supported, and empowered to report bullying incidents without fear of retaliation, while also educating the school community on effective anti-bullying strategies?

## Key Performance Indicators (KPIs)

### 1. Reporting Rate of Bullying Incidents

- Metric: Number of bullying incidents reported per month.
- Target: Increase the reporting rate by 30% within the first six months of implementation.
- Rationale: This KPI will help determine if the new reporting mechanisms are effective in encouraging students to report incidents without fear of retaliation.

### 2. Student Perception of Safety

- Metric: Percentage of students who feel safe at school, measured through regular surveys.
- Target: Achieve a 25% increase in students feeling safe at school within the first year of implementation.
- Rationale: This KPI will assess whether the overall environment has become safer and more supportive for students.

### 3. Incidence of Bullying

- Metric: Number of verified bullying incidents per semester.
- Target: Reduce the number of verified bullying incidents by 20% within the first year of implementation.
- Rationale: This KPI will measure the effectiveness of the anti-bullying strategies and education programs in reducing actual bullying incidents.
